Covid-19 Screening Questionnaire For Sports Clearance

The American Academy of Pediatrics recommends that all children and young adults who have had Covid-19 be screened for heart problems prior to returning to competitive sports.

MILD SYMPTOMS

- Fever, chills lasted less than four days
- Muscle pain/ ache lasted less than four days
- Had no fever, chills or muscle aches

If you had only mild symptoms and currently have no cardiac symptoms, then a detailed cardiac work-up may not be needed. You should follow-up with your primary care provider

MODERATE SYMPTOMS

- Fever, chills lasted more than four days
- Muscle pain/ ache lasted more than four days
- Was admitted to the hospital for at least one day

If you had one of the moderate symptoms, a detailed cardiac work-up may be needed.

SEVERE SYMPTOMS

- Admitted to the hospital for more than one day
- Admitted to the intensive care unit
- Diagnosed with Multisystem Inflammatory Syndrome in Children (MIS-C)

If you had one of the severe symptoms, a detailed cardiac work-up is needed.
